

1. The translator.cxx file is a combination of the intended translator.cxx (Lines 1 - 505) and target_translator.cxx (Lines 507 - 1217) .
2. The quads.s file is a combination of the Intermediate Representation Code (starting of the file) and the Assembly Language Code (after the IR Code) .
3. In case we wish to execute the .s file we need to comment out the IR Code part which is present in the starting. Use of the command: gcc myl.o test1.s -o test1.out
